Satellite radio provides a valuable service that drivers such as myself can use to save time when traveling around cities that have updated weather and traffic 24/7. Thus, saving time, cutting down on pollution sitting in traffic jams, and saving fuel as well. As an XM subscriber, I pay for a service that I should be able to utilize the full potential of including traffic and weather. Please REJECT the NAB's petition 04-160/ Thanks for taking time to read this. Mark
